## **Department of IMMUNOLOGY, VIROLOGY and INFLAMMATION**

### **Post-doctoral position is now opened in Dr Julien Marie lab**

-The Marie lab is focused on the regulatory effects of TGF-beta on the T lymphocytes. We established several mouse models to selectively analyze the effects of TGF-beta on T Lymphocytes (Marie et al Immunity 2006, Doisne et al J. Exp. Med 2009, Worthington Immunity 2015). More information <http://www.crcl.fr/246-TGF-beta-and-immune-evasion.crcl.aspx?language=en-GB>

- English is the language of the lab.

-Selected candidate will address question on the regulation by TGF-beta of the inflammation associated to cancer.

- Motivated candidates must have a solid experience in the analysis of the mouse immune system. The knowledge in either mucosal immunity, immune response in cancer, or microbiota will be a great assess.

- The selected candidate will join a dynamic team. Salary will be covered by the lab and will depend on the expertise of the candidate.

-The positions will be established for 2-3 years and start in fall.

- Candidate should provide a CV and motivation letter, as well as the email address of three referees by **the June 15<sup>th</sup> 2018**

-Candidate that do not fit with this schedule are still welcome to contact Dr Marie

Applications should be sent by e-mail to [julien.marie@inserm.fr](mailto:julien.marie@inserm.fr) and selected candidates will be contacted for interview.
